# OVEN THERMOMETER

The best-selling CDN Oven Thermometer (DOT2) is NSF® Certified and designed to measure oven temperatures with precise accuracy, ensuring best culinary results.

Made with durable laboratory glass, this oven thermometer has a wide temperature range of 150 to 550°F/70 to 280°C. In addition to its culinary benefits, the DOT2 can help save energy by ensuring that heat is not wasted by an oven that's too hot.

"Our customers know that oven temperatures can be off by more than 50°F. Thermostats can become fatigued with age, and leaky door seals can create hot or cold spots. Our oven thermometers are small, easy investments that can have a huge positive impact over time," said Shawn DiGruccio, Executive Vice President of CDN.

It features a versatile and durable stainless steel body with 2-way mounting, allowing the user to hang or place it in different parts of the oven to check for cool or hot spots.

## FEATURES

- NSF® Certified
- Ovenproof
- Durable laboratory glass lens
- Temperature zones
- 304 stainless steel housing
