Superior Quality

All stainless steel is not the same. CDN products are made of a premium grade stainless steel, which is superior to the stainless used in many other products. CDN bimetal thermometer stems are welded to a calibration nut. Less expensive thermometers are only pressed together. The dimple in the stem of our bimetal thermometers indicates the place where the temperature coil is welded to a special bushing and where you will get the most accurate reading. This extra measure provides an additional degree of stability and accuracy, and is unique to CDN. National Sanitation Foundation is an approval agency that certifies that thermometers bearing the NSF® mark are manufactured to high commercial standards. Because of higher listing costs, only a select number of our products carry the NSF® mark. However, all our thermometers and scales are manufactured to NSF® standards in an NSF® Certified facility. We use an incoming inspection program based on military QC standard MILQ9858.
